Dear Parent

We all are aware that certain precautions must be taken during this time of the year to protect ourselves from mosquito-borne diseases.

We, at The Maurya School, are very conscious of the need to be proactive and take necessary steps to minimize the risk of infection during this season. This includes regular fumigation of the school premises, active mosquito repellents in the classes and continuously ensuring the best possible standards and practices of hygiene. At the same time, we would like to gently remind our parents to be equally alert and aware regarding the same.

The following list of precautions need to be kept in mind:

- Mosquito breeding sites include artificial water containers such as discarded tyres, uncovered water storage barrels, buckets, flower vases or pots, cans and cisterns.
- First and foremost, please ensure that you limit outside activity between dusk and dawn. Stay indoors as much as you can.
- Use insect repellent on uncovered skin surfaces when outdoor, especially during the day.

By not letting our guard down; together we can ensure that our children continue to enjoy a safe, happy and healthy environment both at home as well as at school.

Kind regards

Shalini Bajaj
Head of the School
