Dear Parent,

As you are aware that ‘skating’ is being taught to the students of Classes I to V in the school. This sport is practiced on a hard cemented surface; and children enjoy most by skating at a high speed.

The surface as well as speed can sometimes cause grave injuries to the children in case they take a wrong turn, trip, collide with someone, slip, etc. In order to minimize the injuries and their impact, we have decided that students will be allowed to practice skating only if they are suitably equipped with the following safety accessories;

- Helmet
- Pads – Elbow pads, Knee pads & Wrist braces
- Appropriate level of the skates depending on the proficiency of the child. Example - Beginners need to wear Level - 1 skates.

We will divide the students & rinks in three categories & tracks respectively for the beginners, intermediate & proficient so as to minimize accidents.

Kind Regards

Shalini Bajaj
Head of the School
